

AlarmNet Residential

SECURE, RELIABLE ALARM
COMMUNICATIONS SOLUTIONS

We've Got You Covered

Honeywell

Make the Connection

Whether You Rely on a Mobile Phone, Landline or VoIP, AlarmNet's Got You Covered.

You've made the right choice by installing a Honeywell security system to protect your family, home and possessions. For the ultimate protection and peace of mind, we'll help make sure your alarm signals get through with AlarmNet.

AlarmNet's advanced alarm communications can help your signals get through whether you're a mobile phone-only residence, have VoIP digital phone service from your cable company or rely on a traditional landline. With many telephone services today, if there is a power outage your security system may lose its connection and the alarm signal will not reach the central station—putting the safety of your home at risk. AlarmNet provides excellent protection and helps ensure that alarm signals get through to central stations. It's the best way to stay protected...and connected!

Advanced Communications

AlarmNet communicators use the Internet, GSM radios or a combination of both to offer faster and flexible methods of alarm transmission. This provides added reliability and security to help make sure signals are received.

Reliable Path of Protection

You and your family can enjoy peace of mind 24 hours a day, 7 days a week. No matter what technology you choose, all alarm signals are processed through AlarmNet's Network Control Center. Fully supervised, the Control Center sends your signal to the central station to protect your property 365 days a year. Your central station can only provide Internet or GSM wireless radio communications through AlarmNet.

Totally Connected!

Stay in the know wherever you go with Honeywell's Total Connect Remote Services. Total Connect keeps you connected to your family, home and property wherever you are on the same mobile devices you use each and every day.

Real-Time Alerts

Receive text messages, e-mails and video alerts in real-time about important events. Depending upon your system, you can:

- Know when your child arrives home from school or if they haven't arrived home by a certain time
- Be notified if leaks or floods have been detected in laundry rooms, kitchens, bathrooms or basements
- Find out when motion is sensed in outdoor areas like pools, patios and driveways
- Protect indoor valuables from theft by receiving an alert when they have been moved or disturbed

Video Viewing

If you have a laptop, smartphone or any web-enabled device, you've got everything you need to look in on your home and family wherever you are. Record and store video clips, take snapshots, have pictures e-mailed to you upon an event—even view live video on up to six cameras at a time!

Remote Keypad

Total Connect's remote keypad feature works just like a security system keypad. You can access and operate your system remotely or view video from anywhere in the world when using your mobile phone, BlackBerry®, iPhone®, iPad®, iPod touch®, Android™ or other wireless handheld device.

Free mobile apps available!*

About AlarmNet

Honeywell's AlarmNet has been the nationwide leader in alarm communications technology since 1986. A reliable alternative to standard and digital telephone lines for the transmission of alarm signals, AlarmNet networks utilize multiple technologies to provide fast, secure and highly reliable communications solutions, supported by a variety of products and services. AlarmNet is the security industry's only nationwide communications provider that delivers a complete range of options for supervised alarm signal transport applications.

*iPhone app available at Apple's iTunes® App Store^(SM) and Android app available at Android Market. Total Connect subscribers can download the BlackBerry app by logging into their accounts. iPhone, iPad, iPod touch and iTunes are trademarks of Apple Inc. All other trademarks are property of their respective owners.

Two-Way Voice

An excellent complement to your security system, optional two-way voice over GSM only lets central station operators listen in and talk to you or anyone else on the premises when a signal is received*—assuring you that the proper emergency response personnel will be dispatched at a moment's notice should the need arise.

- Provides you with a higher level of protection—letting the operator quickly gather information about the nature and location of an alarm and deal with the situation instantly and effectively
- Does not require any intervention by you to operate—even works without a phone line!
- Operators can provide reassurance and communicate with you until help arrives
- May even startle off an intruder because it proves authorities are on the way
- Depending on your specific system, one or more remote stations may be installed at various locations inside your home

*excluding fire or carbon monoxide alarms
